Plesk Power Toys 3.4

Power Toys: [url]<http://forum.plesk.com/showthread.php?s=&threadid=20134>[/url]

1. Password revealer seems to work very good. I sent myself an email and it arrived, containing all the correct info. I did not try the Template changer, but it loaded without an error.
2. Email Subject Changer loaded. I did not use it beyond this point.
3. Custom DNS loaded and was able to retrieve the current settings for a domain. I did not use it beyond this point.
4. Check Domains seems broken. When you load it, it only provides 1 entry:
5. MySQL Remote Admin User Manager loaded. I did not use it beyond this point.
6. Whois loaded. I was able to do a WHOIS lookup on domains that support the WHOIS service.
7. Newsletter: This is a new features, will let PLESK Admin to send mails to all or selected clients (resellers) or to all domain owners, based on clients filter. This is very helpfull to comunicate with your clients or domain owners, for example if you have an upgrade or downtime etc. Any comments here are welcome.
8. Domain status tool

This tool checks the status of each of the domains on your server.

Status: A green dot indicates the domain is online, a red dot means port 80 does not respond.

IP Match: OK means the domain resolves to the IP you have it assigned to. Any other response indicates the domain is hosted elsewhere or offline.

Domain

Status

IP match

{DOMAIN}

{STATUS}

9. VHOST Writer, 100% editable with predefined things like open_basedir and php_flag log_errors (we will extend if anyone have other ideeas.

10. Alias/Unalias a domain (not available in this beta, mnday or thuesday will be

Even if is seems that is a small adition to a new version, belive us is not. Those two is major ones :-))
